The manual lathe machine isn't the best for a person who is a hobbyist and make things just for fun.I have a Hepworth Hydraulic copy attachment which I have fitted to a Colchester Lathe. I am looking for help to see how the copying attachment works on the back of the lathe to produce a radius on the end of a bar, there are lots of pictures on the internet of the front of the attachments but none of what goes on at the back of the lathe. can any one help, a picture would be great.
