They hover over rivers and lakes and valleys and railroad tracks and even parts of oceans. They can be beautiful and they can be ugly. But most of allBridges in America: Faulty Infrastructure Bridges may not quite be the backbone of infrastructure, but they certainly make up much of its skeletal system. Providing pedestrian and vehicular passageways over obstructions, including rivers, roads, and valleys, bridges have eased the flow of traffic with minimal complication for thousands of years.Investments in bridges were bolstered in 2009 and 2010 with the influx of additional funding from the American Recovery and Reinvestment Act and peaked in 2010 with \$18 billion spent. Despite the recent increases in spending, investments in the country's bridges are insufficient.
