

# Download Manual Calculation Excel Shortcut

All is it possible to force a manual calculation on just a single work sheet from a keyboard shortcut key?  
Regards Mike You're probably aware that Excel has two main calculation modes: automatic and manual. Automatic calculation will re-calculate the workbook when a value changes or based on specific actions (inserting, deleting, hiding rows/columns, or renaming a worksheet). First of all, select the cell where you need to insert a timestamp. After that, use shortcut key Control + : (Press and hold control and then press colon). Once you press this, it will insert the current date (according to your system) in the cell. MICROSOFT EXCEL TRAINING MANUAL For OFFICE 97 / 98 Level: Intermediate to Advanced January 2001
