

Download The Architects Responsibilities In The Project Delivery Process

Design-build (or design/build, and abbreviated D-B or D/B accordingly) is a project delivery system used in the construction industry. It is a method to deliver a project in which the design and construction services are contracted by a single entity known as the design-builder or design-build contractor. It can be subdivided into architect-led design-build (ALDB, sometimes known as ...Effective scope management requires accurate definition of a client's requirements in the Planning and Development stage and a systematic process for monitoring and managing all the factors that may impact or change the program requirements throughout the project design and construction phases through delivery of the finished project. An architect is a person who plans, designs and reviews the construction of buildings. To practice architecture means to provide services in connection with the design of buildings and the space within the site surrounding the buildings that have human occupancy or use as their principal purpose. Etymologically, architect derives from the Latin architectus, which derives from the Greek (arkhi ...GSC Architects is managed by two principals, Tom Cornelius and Joe LaRocca.. Our multi-disciplinary staff allows GSC to match work demands for our clients. We work collectively to form specific teams of experts for each unique project, enabling success throughout the entire process of design, from site planning to final equipment installation and occupancy.
